PORTFOLIO EXPOSURE BY MANAGER

As at October 2024

Source: State Street

INVESTMENT APPROACH

A multi-manager framework is utilised, where several specialist investment managers are selected to form a diverse and complementary mix of investment strategies and styles. This can help reduce volatility by avoiding over exposure to a particular specialist investment manager. Derivatives may be used in managing the portfolio.

INVESTMENT STRATEGY

The strategy is biased towards utilising managers who are fundamental bottom-up stock pickers, have a repeatable investment process, operate within an appropriate risk management framework and operate in an aligned and stable organisational structure. We believe these factors best deliver a stable outcome of returns within a multi-manager framework.

The Implemented Australian Share Portfolio uses broad market managers that invest across the entire market capitalisation spectrum of the domestic equity market. Their portfolios tend to be concentrated in nature and typically hold anywhere between 30-50 companies. This allows for the portfolio to access these managers' high conviction stock picking decisions. This lowers the degree of overlap across securities in each portfolio and lowers the risk of over diversification.

The portfolio will also typically use one to two specialist managers with focused strategies across the small company segment of the domestic share market. This is a relatively inefficient part of the domestic share market where we feel a targeted and specialist approach is warranted. The exposure to small company specialist managers as a whole is typically held in line with the exposure of the small company segment of the share market to the overall share market by capitalisation.

The portfolio blends the above mentioned group of managers, targeting managers who have a long term and consistent track record, are expected to continue to deliver on this track record, and whose investment styles complement each other well.
